RONDO 238 SWIVEL CLIP

The Rondo 238 Swivel Clip can be used in place of the Rondo 139 Joiner and is used to attach Furring Channel to Top Cross Rail in the KEY-LOCK® System.

When using the Rondo 238 Swivel Clip, the Furring Channel can be rotated 360 degrees, therefore enabling any Furring Channel set out required. The span of the Furring Channel between these attachment clips should not exceed the recommendations in Rondo's Professional Design Manual.

For more information about the new Rondo 238 Swivel Clip, visit www.rondo.com.au, or call 1300 36 7663 to speak with a Rondo Technical Sales Representative.
